Re: Anti-biotics in livestock feed  
Docket # 99 P-0485

I urge you to put a halt to the adding of anti-biotics to livestock feed if it is an anti-biotic used in human medicine. I am concerned that our bodies will build up a resistance to anti-biotics because of the over-use in livestock feed. I also feel that too much reliance on the use of anti-biotics in feed allows for growers to keep less than sanitary conditions in their over-crowded barns and coops.
